

25-Seven® Voltair™ Software Package v2.4 Release Notes

4 April 2017, Cleveland, Ohio USA

25-Seven's new update—version 2.4 for the Voltair processor (p/n 1490-00160-001)—is part of our continuing program of Voltair enhancements, adding features and enhancements to our flagship product. This document describes the installation process, as well as all changes implemented since the release of Voltair Firmware 2.3.2.

Firmware Changes:

- Can now control enhancement level from data extraction/control network port (to support Automatic Enhancement for TVC-15)
- Shows boot time on "Information" web UI page
- Add new Enhancement Gain Patterns: "Adjustable/Medium/High" and "Adjustable/High" for testing with TVC-15
- Attempt to detect and warn customer of read-only SSD
- New internal tool to re-encrypt Voltair Classic update package for Voltair Monitor; once used, can convert Voltair Monitor to Voltair Classic
- On UI, changed several "Encoding's to "Enhancing"
