

Field Bulletin: MT2000 Hardware Modification to Improve Battery Run Time

MT2000-FB2 March, 2016

- Modification Urgent
- Modification Recommended
- Modification Required if Problem is Present
- Modification Recommended on Early Units
- Informational Bulletin

A change to the MT2000 has been developed which improves the run time when operating on battery power. This modification extends the typical operating time with a fully charged battery from approximately 90 minutes to over 2 hours.

Units with serial numbers 73-0279 and higher are manufactured, and ship, with this change already in place.

This modification is a hardware change and may be performed on MT2000s with serial numbers 73-0278 and lower. If this update is desired, the unit must be returned to the factory.

Please contact your Linear Acoustic representative for further information regarding this update, or to arrange returning a unit for modification.
